

Digital Literacy Project Report

Name: ARYAN TIWARI
Reg No.: 25BAI11127
Branch: B.Tech CSE AIML
Year: 1st Year
Course Code: CSE0001
Date: 2026

Introduction

This project focuses on developing essential digital literacy skills, including safe internet practices, effective communication, and professional online presence. It covers multiple tasks such as creating an infographic, building a digital portfolio, using coding and collaboration platforms, practicing email etiquette, and understanding cybercrime. The scenario emphasizes the importance of responsible digital behavior in academic and real-world contexts. Through practical activities, the project enhances awareness of cybersecurity risks, improves communication skills, and encourages the use of modern digital tools for learning and collaboration.

Task 1 Write-Up

In Task 1, a digital literacy awareness infographic was created using Canva. It covered three main areas: digital literacy concepts, cybersecurity practices, and email etiquette. The infographic explained how to access, evaluate, and use information effectively, along with safety measures like strong passwords and phishing awareness. It also highlighted professional communication practices. Designing the infographic required organizing key ideas into a clear visual structure, making complex topics easy to understand. This task demonstrated the importance of visual communication in conveying essential information efficiently.

Task 2 Write-Up

Task 2 involved creating a professional digital portfolio using platforms like GitHub, LinkedIn, and Kaggle. Each platform serves a unique purpose in building a digital identity. GitHub was used to showcase coding projects and track progress, LinkedIn to build a professional network and present academic credentials, and Kaggle to explore data science and machine learning. Setting up these profiles provided a foundation for long-term professional growth. This task highlighted the importance of maintaining an online presence that reflects skills, achievements, and learning goals.

Task 3 Write-Up

Task 3 focused on coding and collaboration platforms. HackerRank was used for practicing programming skills and preparing for technical interviews through structured challenges. Google Forms was used to create a digital literacy quiz, demonstrating cloud-based collaboration. The quiz included multiple-choice and short-answer questions, with responses automatically collected for analysis. This task emphasized the role of digital tools in learning, assessment, and teamwork. It

also reinforced the value of continuous practice and collaboration in developing technical and communication skills.

Task 4 Write-Up

Task 4 involved writing professional emails and understanding email etiquette. It included composing a request for assignment extension and an internship application email. Additionally, a checklist of social media do's and don'ts was created. A scenario highlighted how poor communication tone can lead to misunderstandings. This task improved formal communication skills and emphasized clarity, politeness, and professionalism in digital interactions.

Task 5 Write-Up

Task 5 focused on cybersecurity awareness through a phishing case study and an online safety checklist. The case study explained how phishing attacks occur, who is targeted, and the consequences. The checklist provided practical prevention tips, including UPI safety and reporting mechanisms. This task highlighted the importance of vigilance, awareness, and responsible behavior in protecting personal and financial data online.

Conclusion

Overall, this project enhanced my understanding of digital literacy as a combination of technical skills, communication, and cybersecurity awareness. It provided practical experience with tools and platforms essential for academic and professional growth. I learned the importance of maintaining a strong digital presence, practicing safe online behavior, and communicating effectively. These skills will be valuable throughout my academic journey and future career.
